W14-P2: projects section for phone

W14-P3: projects section for another three breakpoints

W14-P4: service section with 2 breakpoints

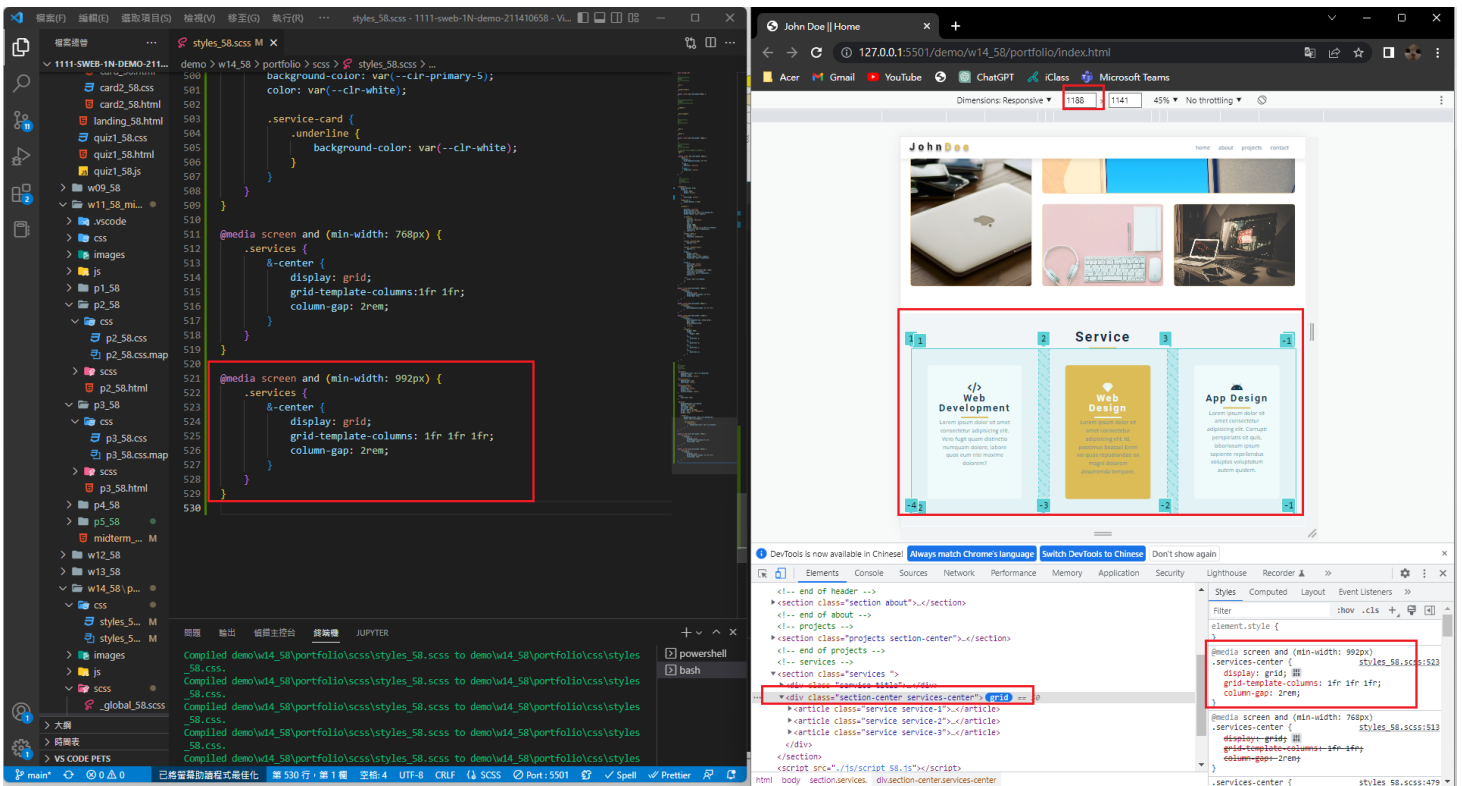

The image displays four screenshots illustrating the development of a 'Service' section in a web application, showing the transition from a single-column layout to a two-column layout using media queries.

Top Left (VS Code Editor): Shows the project structure and the `styles_58.scss` file. The CSS code defines the `.service-card` and `.services` classes, using `var(--clr-white)` for background colors. The `.services` class is styled with `display: grid` and `grid-template-columns: 1fr 1fr` for a two-column layout.

Top Right (Browser Preview): Shows the web application running at `127.0.0.1:5501/demo/w14_58/portfolio/index.html`. The 'Service' section is highlighted with a red box, showing a single-column layout with two service cards: 'Web Development' and 'Web Design'.

Bottom Left (VS Code Editor): Shows the `styles_58.scss` file with the media query `@media screen and (min-width: 768px) {` highlighted, indicating the breakpoint for the two-column layout.

Bottom Right (Browser Preview): Shows the web application running at `127.0.0.1:5501/demo/w14_58/portfolio/index.html`. The 'Service' section is highlighted with a red box, showing a two-column layout with three service cards: 'Web Development', 'Web Design', and 'App Design'. The DevTools Styles panel shows the media query `@media screen and (min-width: 768px) {` applied to the `.services` class.
